

pan DAMN ic™

Dual Mode

Audio Connections

Setup in front of amp

Input - 1/4" connection for input signal. Connect your guitar here.

Output - 1/4" connection for output. Connect the output to your amp.

Setup through Amp Loop

Input - 1/4" connection for input signal. Connect your amp send loop here.

Output - 1/4" connection for output. Connect the output to your amp loop return.

Power Connection

Input - DC jack 2mm (center is negative)

Power Supply: 9 Volt DC or battery 9V Alkaline.

Controls

Color – With the knob turned completely left the color filter is bypassed. As the filter knob is turned to the right the amount of filter being added to the effect is increased.

Virus/Plague Toggle – This switch selects the type of distortion from the softer more overdrive like tone of the Virus setting to the in your face high gain sound of the Plague.

Volume - Sets the overall output level for both of the distortion modes.

Black Gate Edition (Both Versions)

Audio Connections

Setup in front of amp

Input - 1/4" connection for input signal. Connect your guitar here.

Output - 1/4" connection for output. Connect the output to your amp.

Setup through Amp Loop

Input - 1/4" connection for input signal. Connect your amp send loop here.

Output - 1/4" connection for output. Connect the output to your amp loop return.

Power Connection

DC jack 2mm (center is minus)

Power Supply: 9 Volt DC or battery 9V Alkaline. (Power adapter recommended)

Controls

Pre-Gain – This is the first gain stage after the volume control on your guitar. Left is almost but not completely bypass and the more to the right the knob is turned increases distortion.

Bottom – Fatten up the bottom or thin it out for more searing solos. The center position is flat.

Sweeper – After setting your bottom and top EQ use the sweeper control to further shape the EQ curve. Set to taste. The center position is flat.

Top - Adding distortion to a sound always changes the perceived amount of treble. Use the top control to adjust the amount of high-end frequencies in the sound.

Volume - Sets the overall output level.

Less/More Toggle – This switch selects the intensity of the second gain stage before the EQ. This increases the number usable sound shaping tones you can produce with this pedal

Black Gate Edition - pan*DAMN*ic (VIRUS)

A smoother, creamier like overdrive distortion to fuzz

Black Gate Edition - pan*DAMN*ic (PLAGUE)

A more in your face distortion to fuzz
